Can you trust the fabric?

Bill Bordass
WILLIAM BORDASS ASSOCIATES
&

the Usable Buildings Trust
www.usablebuildings.co.uk

Can you trust the fabric?

- 1 Can you trust the infiltration?
- 2 Can you trust the insulation?
- 3 Can you trust the doors?
- 4 Can you trust the windows?

A photograph of a modern building with a glass facade and a concrete walkway. The image is slightly blurred, giving it a sense of motion or a candid shot. The text is overlaid on the right side of the image.

Fabric First:
*Efficient services need
to be able to rely on it*

*Otherwise services will
need to be oversized,
supplemented, and/or
operated at higher power
for longer hours*

Elizabeth Fry, UEA, *repeat tests by BSRIA*

Air permeability
(m^3/m^2 per hr @ 50 Pa):
1994: 3.0 before handover
1998: 4.7 - technique?
2011: 3.8, with
kitchen removed

We can do much better now
... but will it last?

Spot 14.5 °C

Local infiltration can be a problem
even where overall standards are good

Cross-laminated timber construction
does well at the Woodland Trust

A Passivhaus window
could be better still
Plummerswood

Thermal bridging and possible convective by-pass

*at the
National Trust*

A photograph of a wooden ceiling with a long, narrow window. A red fire alarm pull station is visible on the left side of the ceiling. The window is partially open, and the text is overlaid on the bottom right of the image.

Will windows provide the calculated ventilation area ... *or will they barely clear their frames and reveals?*

Glare can come from funny places
from cars to the North at the Woodland Trust

Can you naturally-ventilate open plan in Winter? *Some difficulties at Woodland Trust*

We're hoping to optimise this in the follow-on project this summer, *with heat flux sensing and time lapse IR*
